

# AI CLASSROOM TOOLS

As Artificial Intelligence (AI) becomes increasingly integrated into education, many educators face uncertainty about how to effectively leverage these tools in their classrooms while ensuring student safety and digital literacy. This workshop addresses those concerns by equipping educators with a clear understanding of AI's abilities and limitations, and exploring practical ways to incorporate AI into their teaching practice. Participants will also engage in discussions about the challenges and opportunities of students using AI in their learning, and how to create a supportive environment for their responsible AI use.

## Why Engage in this Learning:

Artificial Intelligence is a tool that many educators are excited to explore, not only for planning and designing instruction but also as an interactive resource in the classroom. This service offers a hands-on experience where educators can learn to use AI in practice and feel empowered to discover new ways to harness this powerful tool in the future.

**Audience:** AI Classroom Tools is designed for teachers and school leaders seeking a strong understanding of how to effectively leverage AI in the classroom for regular use.

**One day • Up to 35 participants • Onsite: \$8,500**

## Outcomes:

- Understand the abilities and limitations of AI for use in an educational setting.
- Begin to develop strategies for strong AI Prompt Engineering to maximize the potential return from a generative AI tool.
- Leverage AI to enhance efficiency in classroom planning and curriculum design.
- Explore how students can responsibly use AI for learning, and how to introduce AI in a supportive classroom setting.
